Application/Control Number: 09/928,853 Page 2

Art Unit: 1796

1. A request for continued examination under 37 CFR 1.114 was filed in this application after a decision by the Board of Patent Appeals and Interferences, but before the filing of a Notice of Appeal to the Court of Appeals for the Federal Circuit or the commencement of a civil action. Since this application is eligible for continued examination under 37 CFR 1.114 and the fee set forth in 37 CFR 1.17(e) has been timely paid, the appeal has been withdrawn pursuant to 37 CFR 1.114 and prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on March 18, 2008 has been entered.

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

3. Claims 1-4, 7, and 9-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Blum et al. ('393) in view of Schwab et al. ('294) and EP 159117.

Application/Control Number: 09/928,853 Page 3

Art Unit: 1796

Blum et al. disclose water dispersible binder compositions comprising a urethane modified polyester polyol and a blocked polyisocyanate component. See abstract and columns 3-6.

- 4. The urethane modified polyester polyol of Blum et al. differs from that claimed in terms of the percent content of the reactants and the required use of applicants' component A4); however, urethane modified polyols analogous to those of Blum et al., derived from applicants' claimed components in amounts overlapping those claimed, were known to be useful in the production of aqueous coating compositions at the time of invention. This position is supported by the teachings of Schwab et al. at columns 1-3. Given that the urethane modified polyols of Schwab et al. have molecular weights and acid and hydroxyl numbers that meet those required by Blum et al. and that the respective polyols of Blum et al. and Schwab et al. would be expected to be chemically analogous based upon their similar chemistries, the position is taken that it would have been obvious to practice the invention of Blum et al. using the urethane modified polyol of Schwab et al.
- 5. Furthermore, though Blum et al. disclose numerous blocking agents for masking the polyisocyanate, patentees are silent regarding the use of pyrazole blocking agents. Still, the use of pyrazoles as blocking agents for polyisocyanates that are to be incorporated into aqueous compositions in masked form was known at the time of invention. This position is supported by the teachings of EP 159117 at page 4, lines 4+. Additionally, the secondary reference discloses that a benefit of using the pyrazole blocking agents is that the deblocking temperature is significantly lower as compared to the deblocking temperature of other conventional blocking agents. Since lower deblocking temperatures require less energy input and, therefore, require

Application/Control Number: 09/928,853 Page 4

Art Unit: 1796

less expense, the position is taken that it would have been obvious to utilize the pyrazole blocking agents within the primary reference, so as to obtain a coating system that is less expensive to apply.

6. Applicants' remarks have been considered, and the rejection has been modified in response.

Any inquiry concerning this communication should be directed to R. Sergent at telephone number (571) 272-1079.
